IN THE CLAIMS:

1. (Currently Amended) A method comprising:

upon accessing content, displaying the content on a display screen in a first rendering mode,

collecting a selection of a second rendering mode,

showing the content according to said second rendering mode,

collecting a request to close the content, and subsequently inquiring whether to save the second rendering mode for said content,

collecting an indication whether to save the second rendering mode for said content,

correlating the second rendering mode to an origin of the content, and storing information about said correlating, if said indication was affirmative, and

during a next access, ~~subsequently~~ using said information to show a revised version of the content from said origin, in the second rendering mode instead of the first rendering mode if the indication was affirmative, said revised version having been revised during a time interval after said showing of the content according to said second rendering mode, and before said using the information to show the revised version, ~~subsequently accessing said revised version~~,

wherein said revised version of the content is accessible without a bookmark, [[and]]

wherein the second rendering mode comprises a normal rendering mode, a re-authored mode, a narrow small screen rendering mode, or comprises an overview according to a thumbnail small screen rendering mode, and

wherein said revised version of the content has been revised between said request to close the content and said next access, even if said indication whether to save the second rendering mode was affirmative.

2.   CANCELLED.

3.   (Previously Presented) The method of claim 1, wherein the content is accessed via the internet.

2

4.   (Previously Presented) The method of claim 1, wherein the first rendering mode is a default rendering mode that is specified by a provider of the content in source code.

5. CANCELLED.

6. CANCELLED.

7. CANCELLED.

8. CANCELLED.

9. (Original) The method of claim 3, wherein the content accessed via the internet requires downloading an amount of data dependent upon what rendering mode is employed.

10. (Original) The method of claim 1, wherein the method is performed iteratively, if the user has a change of preference.

11. (Previously Presented) A computer-readable medium storing a computer-executable code which when executed performs the method of claim 1.

12.   CANCELLED.

13.   CANCELLED.

14.   CANCELLED.

15.   CANCELLED

16.   CANCELLED.

17.   CANCELLED.

18. (Currently Amended) A method comprising:

upon accessing content, displaying the content on a display screen in a first rendering mode,

collecting a selection of a second rendering mode,

showing the content according to said second rendering mode,

collecting a request to close the content, and subsequently inquiring whether to save the second rendering mode for said content,

collecting an indication whether to save the second rendering mode for said content,

correlating the second rendering mode to an origin of the content, and storing information about said correlating, if said indication was affirmative, and

during a next access, subsequently using said information to show a revised version of the content from said origin, in the second rendering mode without further indication of a user preference if the indication was affirmative, said revised version having been revised during a time interval after said using the information to show a revised version of the content showing of the content according to said second

wherein said revised version of the content is accessible without a bookmark, [[and]]

wherein the second rendering mode comprises a normal rendering mode, a re-authored mode, a narrow small screen rendering mode, or comprises an overview according to a thumbnail small screen rendering mode, and

wherein said revised version of the content has been revised between said request to close the content and said next access, even if said indication whether to save the second rendering mode was affirmative.

19. CANCELLED.

20. (Previously Presented) The method of claim 18, wherein the content is accessed via the internet.

21.   (Currently Amended) A computer-readable medium storing a computer-executable code which when executed performs the functions of:

upon accessing content, displaying the content on a display screen in a first rendering mode,

collecting a selection of a second rendering mode,

showing the content according to said second rendering mode,

collecting a request to close the content, and subsequently inquiring whether to save the second rendering mode for said content,

collecting an indication whether to save the second rendering mode for said content,

correlating the second rendering mode to an origin of the content, and storing information about said correlating, if said indication was affirmative, and

~~subsequently~~ during a next access, using said information to show a revised version of the content from said origin, in the second rendering mode instead of the first rendering mode if the indication was affirmative, said revised version having been revised during a time interval after said showing of the content according to said second rendering mode, and before said using the information to show the revised version ~~subsequently accessing said revised version,~~

wherein said revised version of the content is accessible without a bookmark, [[and]]

wherein the second rendering mode comprises a normal rendering mode, a re-authored mode, a narrow small screen rendering mode, or comprises an overview according to a thumbnail small screen rendering mode, and

wherein said revised version of the content has been revised between said request to close the content and said next access, even if said indication whether to save the second rendering mode was affirmative.

22.   CANCELLED.

23.   (Previously Presented) The computer-readable medium of claim 21, wherein the content is accessed via the internet.

24.   (Currently Amended) A terminal comprising:

means for displaying content on a display screen in a first rendering mode and for subsequently showing the content according to a second rendering mode;

means for collecting a selection of the second rendering mode, wherein the means for collecting is also for collecting a request to close the content, and

means for correlating the second rendering mode to an origin of the content and for storing information about said correlating, if an affirmative indication is received by the terminal after said request to close, said indication indicating whether to save the second rendering mode for said content,

wherein said means for collecting is also for subsequently collecting, during a next access, a request to show a revised version of the content from said origin, in the second rendering mode instead of the first rendering mode if said indication was affirmative, said revised version having been revised during a time interval after said showing of the content according to said second rendering mode, [[and]]

wherein the second rendering mode comprises a normal rendering mode, a re-authored mode, a narrow small screen rendering mode, or comprises an overview according to a thumbnail small screen rendering mode,

wherein said means for displaying comprises a display or other hardware, and

wherein said revised version of the content has been revised between said request to close the content and said next access, even if said indication whether to save the second rendering mode was affirmative.

25.   CANCELLED.

26.   (Previously Presented) The terminal of claim 24, wherein the content is accessed via the internet.

27.   (Currently Amended) A terminal comprising:

   display screen configured to display content in a first rendering mode and further configured to subsequently show the content according to a second rendering mode;

   user input device configured to collect a selection of the second rendering mode, wherein the means for collecting is also for collecting a request to close the content; and

   correlation module configured to correlate the second rendering mode to an origin of the content, and for storing information about said correlation, if an affirmative indication is received by the terminal after said request to close, said indication indicating whether to save the second rendering mode for said content;

   wherein said user input device is further configured to subsequently collect, during a next access, a request to show a revised version of the content from said origin, in the second rendering mode instead of the first rendering mode if said indication was affirmative, said revised version having been revised during a time interval after said showing of the content according to said second rendering mode, [[and]]

   wherein the second rendering mode comprises a normal rendering mode, a re-authored mode, a narrow small screen rendering mode, or comprises an overview according to a thumbnail small screen rendering mode, and

   wherein said revised version of the content has been revised between said request to close the content and said next access, even if said indication whether to save the second rendering mode was affirmative.

28.   CANCELLED.

29. (Previously Presented) The terminal of claim 27, wherein the content is accessed via the internet.
